

SANITIZED FOR PUBLIC DISTRIBUTION. Per the sanitization convention applied in the original 2026-06-17 affidavit and the 2026-06-23 supplemental affidavit. The original signed and unsanitized version remains in the cardholder's private records and the bank's dispute file. The case facts, sworn statements, and analysis are otherwise unchanged.

Second Supplemental Affidavit in Support of Disputed Transaction

Cardholder: Jay Puckett **Email:** investigations@obsidianwatch.org
Date of second supplemental affidavit: 2026-06-24 **Merchant:** Creality (Shenzhen Creality 3D Technology Co., Ltd.) **Third-party carrier on the non-delivered package:** SpeedX **Third-party intermediary previously introduced into dispute:** Seel, Inc. **Cross-reference:** This second supplemental affidavit supplements, corrects in part, and does not otherwise replace the original sworn affidavit of 2026-06-17 and the supplemental affidavit of 2026-06-23 in the same dispute.

1. Purpose of this second supplemental statement

I, Jay Puckett, am the cardholder of record for the transaction currently in dispute with Creality. I am submitting this second supplemental affidavit under penalty of perjury for two purposes:

- 1. To correct, transparently and on the record, factual statements made in my original 2026-06-17 affidavit that, upon further review, do not accurately describe the package contents I actually received.** The corrections are material to the factual record of the dispute and are made proactively rather than left to stand.

2. To document, on the record, the specific SpeedX delivery account, the physical impossibility of the SpeedX claim given my property's gated configuration, and the merchant's subsequent shifting of the delivery account when challenged.

The chargeback dispute with my bank remains active. The factual basis for the dispute is reinforced, not weakened, by the corrections made in this second supplemental affidavit. All other sworn statements in my 2026-06-17 original affidavit and my 2026-06-23 first supplemental affidavit remain in effect except as specifically corrected here.

2. Material correction to the factual record of what was received

In my original 2026-06-17 affidavit, §2 ("What was actually received") stated:

"The package I received from Creality contained: One (1) 3D printer build plate / print bed (replacement consumable); A small number of replacement heater-nozzle assemblies (consumable parts)."

This statement was incorrect and is withdrawn. I regret the inaccuracy in the original affidavit. The correction is made proactively and transparently here for the record.

The accurate factual record of the order, the three packages used to fulfill the order, and what was received and not received, is as follows.

2.1 The order

The Creality order included multiple items, all treated by the merchant as a single order. Per the merchant's representation, the items in the order included:

- One (1) Creality K2 Plus 3D printer
- One (1) Creality CFS (Creality Filament System) module
- One (1) Creality CR-Scan Otter 3D scanner
- One (1) 3D printer build plate (intended for use with the CR-Scan Otter)
- A quantity of replacement heater-nozzle assemblies (intended for use with the CR-Scan Otter)

2.2 The three packages

The merchant fulfilled the order across three separate packages:

Package 1 (FedEx): Contained the Creality K2 Plus 3D printer. **Received and accepted by the cardholder.** No dispute as to this package.

Package 2 (FedEx): Contained the Creality CFS (Creality Filament System) module. **Received and accepted by the cardholder.** No dispute as to this package.

Package 3 (SpeedX, tracking number SPXBNA007982605180000011): Per the merchant's representation, contained the Creality CR-Scan Otter 3D scanner, the 3D printer build plate, and the replacement heater- nozzle assemblies. **Not received by the cardholder.** This is the package the chargeback dispute concerns.

2.3 The items I received

I received the items in Packages 1 and 2 (the K2 Plus printer and the CFS module) without incident. Those items are not part of the dispute and I do not contest the merchant's right to retain payment for those items.

2.4 The items I did not receive

I did not receive the items represented to be in Package 3:

- The Creality CR-Scan Otter 3D scanner (approximately \$700 retail value at the time of the order)
- The 3D printer build plate
- The replacement heater-nozzle assemblies

3. The SpeedX delivery account and its physical impossibility

3.1 The carrier and the tracking record

Package 3 was shipped by SpeedX, an e-commerce delivery service. The tracking number is SPXBNA007982605180000011. The SpeedX tracking record indicates:

- Status: Delivered
- Location stated by carrier: Front door
- Date and time stated by carrier: 21 May 2026 at 14:17

3.2 The physical impossibility of the SpeedX claim

My residence is fully fenced and gated. The front door of the residence is not accessible to the public. Entry to the property requires passage through a gated perimeter that is not open to deliveries, walk-up traffic, or unauthorized entry.

For the SpeedX claim of “delivered to front door” to be physically true, the SpeedX driver would have had to:

- Open or otherwise pass through the gated perimeter, AND
- Approach the residence’s front door, AND
- Leave the package at the front door

I did not authorize SpeedX or any SpeedX driver to enter the gated perimeter of the property. I was not contacted by SpeedX for gate access authorization. There is no record of any party from SpeedX entering the gated perimeter on 21 May 2026 at 14:17 or at any other time.

I did not observe a package being delivered to my front door on 21 May 2026 or at any time during the period the SpeedX tracking record purports to cover. No package matching the SpeedX delivery record was present at the front door, on the porch, or anywhere inside the gated perimeter at any time.

The SpeedX claim of “delivered to front door” at the specified timestamp is not consistent with the physical layout of my property and is not consistent with my contemporaneous observation of the property.

3.3 The merchant's shifting account of the alleged delivery

After I informed Creality of the SpeedX claim's physical impossibility - specifically, that my property is fenced and gated and that the front door is not publicly accessible - Creality modified its account of the alleged delivery. Creality stated that the package had been placed in the driveway.

The driveway is outside the gated perimeter. SpeedX's tracking record does not state that the package was placed in the driveway; the tracking record states that it was delivered to the front door.

I did not observe a package in the driveway on 21 May 2026 or at any other time. No package matching the SpeedX delivery record was present in the driveway at any time during the period in question.

The shift from "delivered to front door" (the tracking record) to "placed in the driveway" (the merchant's subsequent account after the front-door claim was challenged) is itself a documented modification of the merchant's representation of the delivery event. The shift occurred only after the cardholder pointed out the physical impossibility of the original front-door claim. The modified account is unsupported by any contemporaneous carrier record and is inconsistent with the tracking record on which the merchant relies for the underlying claim of delivery.

3.4 Network and home-record corroboration

As documented in the original 2026-06-17 affidavit §4, the cardholder's network shows no record of a Creality CR-Scan Otter scanner having been present on the cardholder's WiFi network. The CR-Scan Otter is a WiFi-enabled device that advertises itself via mDNS upon first power-on; a delivered device that had been powered on within range of the cardholder's network would have generated mDNS announcements visible in the captures documented in §4 of the original affidavit. No such announcements were captured.

The absence of network evidence is corroborative of non-delivery: a device that was delivered and powered on would have produced network evidence; no network evidence exists; non-delivery is the consistent explanation. (The absence of network evidence is also consistent with "delivered but never powered on," which itself is inconsistent with any merchant claim that the device was received and used.)

4. The amount disputed

The chargeback dispute initiated 2026-06-17 is limited to the portion of the order's purchase price corresponding to the contents of Package 3 only: the Creality CR-Scan Otter 3D scanner, the print bed, and the replacement heater-nozzle assemblies.

The cardholder is NOT disputing the portions of the order corresponding to:

- The Creality K2 Plus 3D printer (Package 1, received and accepted)
- The Creality CFS module (Package 2, received and accepted)

I explicitly limit the dispute to the items I did not receive. I do not dispute the portion of the purchase price corresponding to items I did receive. I am the cardholder; I am not seeking unwarranted relief. The dispute is for the goods I paid for and did not receive, not for goods I paid for and did receive.

5. Updated forensic-indicator observations applicable to Package 3

The original 2026-06-17 affidavit's §5 forensic-indicator observations are clarified in light of the corrected factual record:

5.1 The three-package split and the carrier-selection asymmetry

The merchant shipped a single order across three packages. The two FedEx-shipped packages contained the K2 Plus printer and the CFS module - the items the cardholder did receive. The single SpeedX-shipped package contained the high-value CR-Scan Otter scanner (and its associated bed and nozzles) - the items the cardholder did not receive.

FedEx provides strong proof-of-delivery infrastructure (signature capture, photographed proof of delivery, GPS verification of delivery location, tracking precision). SpeedX is an off-brand e-commerce delivery service with weaker proof-of-delivery infrastructure (documented reports of "delivered" status without verifiable proof, no signature capture, no photographed proof of delivery, no GPS verification visible to consumers).

The merchant's carrier selection routed the high-value disputed item through the carrier with the weakest proof-of-delivery infrastructure while routing the lower-individual-value items through the carrier with the strongest proof-of-delivery infrastructure. This carrier-selection pattern is forensically inconsistent with normal merchant fulfillment practice for a high-value item.

5.2 The shifting delivery account

As documented in §3.3 above, the merchant's account of the alleged delivery shifted from "delivered to front door" (the tracking record) to "placed in the driveway" (after the front-door claim was shown to be physically impossible). The shift occurred only after the cardholder challenged the original account. A consistent and accurate account of delivery would not have required modification when physical-layout facts were introduced.

5.3 The records the bank's process can compel

I respectfully ask the bank to consider exercising its dispute- process powers to compel SpeedX to produce, with respect to tracking SPXBNA007982605180000011:

- The GPS-verified location of the package at the timestamp marked "delivered to front door"
- The photographic proof-of-delivery, if any
- The signature capture or other receipt verification at delivery
- The driver's identification and credentials for the alleged delivery
- Any record of attempted contact with the cardholder for gate-access authorization

If SpeedX cannot produce these records, the merchant's representation of delivery is unsupported by carrier-side evidence. If SpeedX produces records that contradict the merchant's claim, the records themselves resolve the dispute.

6. Reaffirmation and continued statements

I reaffirm the sworn statements made in my original 2026-06-17 affidavit and my 2026-06-23 first supplemental affidavit, except as specifically corrected in §2 above. Specifically:

- The merchant has not produced the carrier records, the proof-of-delivery records, or any other records that would substantiate the merchant's representation of delivery of Package 3
- The merchant's redirection of the dispute to Seel, Inc. (a third-party intermediary documented in my 2026-06-23 first supplemental affidavit and the companion OWG investigation case file as operating outside California state insurance regulation per the active class action *Mickey v. Seel, Inc.*, N.D. Cal. case 4:26-cv-01336) remains an active part of the dispute conduct
- The merchant's request for direct ACH, wire, or SWIFT transfer information to a bank account outside the original card-network payment rail (documented in my 2026-06-23 first supplemental affidavit §5) remains an active part of the dispute conduct
- I have not provided, and will not provide, direct banking-channel transfer information to the merchant
- I have not withdrawn, and will not withdraw, the chargeback dispute
- I have not accepted, and will not accept, any refund-confirmation message from the merchant or from Seel as evidence of refund unless and until the actual receipt of funds is verified through my bank account or the original card-network payment channel

The chargeback dispute should proceed. The corrections in §2 of this second supplemental affidavit refine the factual record but do not weaken the dispute; they strengthen the dispute by establishing the accurate, specific, and limited scope of what the cardholder is disputing and what the cardholder is not disputing.

7. Attestation

I declare under penalty of perjury under the laws of the United States that the foregoing is true and correct to the best of my knowledge.

This second supplemental affidavit is digitally signed below using my published PGP key (fingerprint 9267 A71E 3F0A 4EED 2F97 3F9B A3E2 52F2 4635 CC6C). The signature allows the bank to verify that the

document has not been modified after signing. The same key signed the original 2026-06-17 affidavit and the 2026-06-23 first supplemental affidavit in this dispute.

Executed this 24th day of June, 2026.
